"Beard donor area (fueoptions) - 2 weeks later"

*Wed Nov-22-06 10:46 AM by Dr. Arvind*

Dear forum readers,  
As you will remember, fueoptions, (a forum poster), had 800 + facial hair grafts extracted in Oct-Nov 2006. Some details of the recent procedure can be read at the following link.  
[http://www.hairsite4.com/dc/dcboard.php?az=show\\_topic&forum=12&topic\\_id=47318&mode=full](http://www.hairsite4.com/dc/dcboard.php?az=show_topic&forum=12&topic_id=47318&mode=full)

Fueoptions has limited robust body donor hair to be used and his scalp donor has been used up, before he visited our clinic, to a large extent. He had 120 facial hair grafts extracted 8 months earlier to assess the healing.

He recently sent us some pictures of the healing of those facial hair donor sites at completion of 2 weeks. The facial donor sites were the chin and the areas below the jawbones.

I would like to share them with the forum readers.  
Please let me know if you have any queries.  
Regards,  
Dr. A

Dr A., looks good. Question: In order to extract the beard hair using your technique, doesn't the hair have to be grown out for several days?

Hoping for BHT results!

Looks good but how well do beard grafts grow.

Minoxidil twice a day  
1.25 proscar once a day  
3083 grafts by Dr. Armani in April 2004

My guess was from the 120 planted 8 months ago is that most grew but they were mixed in with existing hair they are around twice the diameter of normal hair and i could definitely feel them...  
I am keeping my hair under 1cm length so how it grows after that length is not an issue for me...for me it was the density and coverage these hairs give at least twice that of my scalp hair and at least 5 times the density of my body hair so 600 beard means 1200 head hairs or 3000 body hairs to me. when placed together with other types of hair the coverage is excellent and the area looks dense and strong...i had 10 put in a sq cm just above my temple in a thinning area as a test 8 months ago and it really looked dense,dark and as if i had dense packing in the area...the other 110 went in my crown...  
I am 3 weeks out now and the 30% or so of beard hairs that have not dropped still give really good coverage in the area they have been placed  
Once again i must stress i would not advocate the use of these hairs on virgin scalp or if you want to grow your hair long...they must be mixed around 1 beard to 3 or 4 head or 9 or 10 body hair..

Fueoptions, if mixed in with scalp hair at only 3-5/cm, do you still think growing the hair out on top to say 4 inches would be a problem?

Hoping for BHT results!

In response to [Reply # 5](#)

grow your beard to that length and that is almost certainly how it will grow on your head...the characteristics are likely to be the same...of course 1 beard hair that is masked by 5/6/7/8 head hairs might not even be see no matter what the hair grows like!  
some peoples beard hair grows straight some not so straight...this also applies to the density of the beard hair shaft and how many beard follicles are on someones face/neck. everybodys different...colour is also an issue in my beard i have ginger/brown/grey hairs!
